Theme settings

Completely impact multifunctional processes and wireless supply chains. Dynamically engage business meta-services for market-driven data. Collaboratively restore cross-platform users before client-centered manufactured products.

Active	Title	Description	Actions
☐	Theme 1	Lorem ipsum	Preview	Download	Duplicate	Build rules	Manage files	Delete
☐	Example theme	Lorem ipsum	Preview	Download	Duplicate	Build rules

[New]　[Upload]

Active: Check box allows only one theme to be selected at a time, but allows no themes to be selected. Saves immediately.

Is this a good idea? Alternatively can have an explicit "activate/deactivate" action in "actions" list.

Actions:
 * Preview launches new window with preview of the theme (not in theme mapper).
 * Download downloads Zip file
 * Duplicate brings up 'new theme' overlay with this team as the base
 * Build rules shows theme mapper
 * Manage files shows file manager (ZODB themes only)
 * Delete deletes the theme after confirmation dialogue (ZODB themes only)

```

Theme base

```
Sunburst   ▼
```

☑ Mark external links

☑ External content in new window

Adds the settings from the default "Themes" control panel, which we need to hide on import. Change name of control panel from "Diazo theme" to "Themes", i.e. replace the default themes control panel.

Show content type icons

```
Always show icons   ▼
```

Alternatively, we could put the "mark external links", "external content in new window", "show content type icons" and "use popup overlays for simple forms" into the "site" control panel, since they're not really theme-related.

☑ Use popup overlays for simple forms

HTML mockup   File: index.html ▼ ⓘ ↻ ⊕

Unthemed content   ↻ ⊕

Theme rules   ⊕

```
<rules>

  </rules>
```

Theme preview   ⓘ ⊕

Icons

⊕ Full screen toggle (use arrow icon)

↻ Follow links toggle (find better icon)

ⓘ Source toggle (use angle brackets icon)

Make icons show "future state" instead of current state and make sure on-hover help text is meaningful.

Show icons as on/off toggles (depressed when on)? Need better graphics/visual design input!

HTML mockup

Hide the File: selector if there is only one file.

Rule editor

Allow hight to be resized by dragging down (pushes preview down)

New rule wizard

* Use saved selection, but clear on insert (otherwise it appears to "cache" the selection and it is difficult to insert a new rule)
* Highlight insert more clearly and describe where

Preview

* Allow expand/collapse to hide?
* Does not replace standalone preview (from "themes" list)
* Allow full screen and source view

Help

* Provide more in-depth help (possibly over multiple pages, in iframe overlay)
* More end-to-end instructions
